

CheckUps and eScreen, Inc. to assist local businesses with pre-employment testing

NEW YORK, NY, May 23, 2007 --- CheckUps, the retail-based, non-emergency walk-in medical facility, today announced an agreement with eScreen, one of the nation's leading drug screening firms, to provide pre-employment screening services for businesses.

"This expansion of our capabilities will help ensure employers that their prospective and current employees meet strict health and safety standards," said Jack Tawil, chief executive officer of CheckUps.

CheckUps currently operates walk-in retail health clinics in 23 cities in Florida, Alabama, Louisiana and Mississippi, all located inside Wal-Mart (NYSE: WMT) stores.

eScreen, Inc., based in Overland Park, Kansas, develops, manufactures and markets employment screening products for hiring and maintaining an efficient workforce. The company deploys its proprietary technology to occupational health clinics nationwide. This technology creates an electronic, web-based preferred network for businesses seeking faster drug test results and paperless transactions. eScreen currently processes millions of healthcare and corporate data transactions a year through the eScreen Occupational Health Network (EOHN).

"eScreen is very pleased to be associated with CheckUps in this relationship, and we expect it to provide a value-added service to the communities in which CheckUps clinics are located," said Robert D. Thompson, chief executive officer of eScreen.

“We manufacture and market the first and only automated instant clinic-based rapid drug testing device,” he said. “The drug screening industry is highly fragmented and the testing process requires extensive, time-consuming paper management and extended turnaround time on test results. eScreen offers a rapid, electronic, paperless solution to collection facilities to service their customers in the most efficient and consistent method.”

In addition to providing an automated drug screening process, eScreen expands the tools available to drug test program administrators, offering online services with real-time drug test and background check data to take the paper chase out of pre-employment drug testing.

“This service makes it easier for employers to certify the health and safety of workers as well as customers,” Tawil said. “The proprietary equipment is being installed in CheckUps clinics and will be managed by CheckUps certified nurse practitioners,” he added.

Check-Ups clinics diagnose and treat common ailments such as strep throat, ear and sinus infections, and provide routine pediatric care, blood screenings, and immunizations, along with services such as healthy living counseling. CheckUps nurse practitioners can write and email prescriptions to the patient’s preferred pharmacy. Visits typically take under 15 minutes and no appointments are necessary.

“CheckUps offers consumers a new, lower cost option for non-emergency health care,” said Tawil. “Our mission is to make quality, affordable medical care conveniently available to everyone in our country. CheckUps is the new model for basic health care delivery in America.”
